HOW TO ENABLE BLIND PEOPLE MAKE FRIENDS WITH PEOPLE OF THE SAME HOBBY?

cost: 1.5M\$

Urbino is a personal wearable home machine that uses Artificial intelligence and sensors to satisfy user's needs. For people with visual impairments, making friends online, play with friends offline, navigation, description, localization of objects through 3D sound provides a happier, more independent life.

The diagram is a flowchart showing the transition from a 'BEFORE' state to an 'AFTER' state. In the 'BEFORE' state, a person with a visual impairment is shown struggling to find friends and navigate. In the 'AFTER' state, the person is shown using the Urbino device to successfully find friends and navigate, leading to a happier and more independent life.
